

David Schwob

Summary

Senior Backend Developer with 20+ years of experience designing and maintaining high-availability database systems and data pipelines across healthcare and pharmaceutical domains.

Proven track record in reducing system latency, improving data integration reliability, and leading modernization initiatives in Oracle/Linux environments and Agile SDLC.

Passionate about mentorship, process automation, and driving long-term technical strategy. Practitioner of AI-assisted development — applying LLM tooling as a force multiplier for rapid prototyping, toolchain quality, and documentation at scale.

Skills

Database/Back-End

- Highly skilled with Oracle, MySQL, SQL Server, and PostgreSQL
- Executed multiple platform migrations
- Implemented ad hoc data mapping tool entirely in static PL/SQL

Scripting and Automation

- Automation of routine administrative work
- AZDO build pipeline customization
- PXE boot automation

Dev Tools

- Architected branching schemes and build systems across multiple platform migrations
- CI/CD pipeline integration with proprietary desktop tooling

Integration / Data

- High degree of comfort with EDI transaction sets
- Multiple deployments of off-the-shelf and custom EDI solutions

AI-Assisted Development

- Pragmatic use of LLM-based coding assistants (GitHub Copilot, etc.) for prototyping and code generation
- AI-accelerated documentation and runbook authoring
- Toolchain hardening via AI-assisted script review and test generation
- Operational troubleshooting augmentation using AI for log analysis and hypothesis generation

Web / Front-End

- Rapid prototyping in ColdFusion
 - Internal toolchain development in JS
-

Experience

Excellus BCBS — Software Developer 3 | Buffalo, NY | 2022–Present

Sr. Developer for regional health insurance carrier.

- Leverages AI-assisted development as a force multiplier: rapid prototyping of solutions, hardening of CI/CD toolchains, generating comprehensive documentation, and accelerating root-cause analysis on operational incidents
- Customization for medical claims (EDI) clearinghouse
- Buildout of AZDO pipeline integration with proprietary desktop tools
- Mentoring and evangelizing of full life cycle SDLC and Agile methodologies

ValueCentric — Lead Software Engineer | Buffalo, NY | 2006–2022

Lead Software Engineer with pharmaceutical data management company.

- Designed release branching system to support full SDLC across multiple concurrent releases
- Conversion of MySQL-based BI system to Oracle RDBMS, improving query performance and scalability
- Built many-to-one data mapping system in pure PL/SQL, eliminating manual transformation work

Fused Solutions — Sr IT Engineer | Potsdam, NY | 2002–2006

Sr. Engineer with software services company.

- Administration of high availability VOIP call center
- Created staging system for call center's supporting applications
- Deployed PXE boot server for desktop imaging system

SLIC — Technical Support | Potsdam, NY | 2001–2002

Tech support with regional ISP.

- Fielding of dialup support calls
- Troubleshooting of small office firewall appliance as 3rd party tech support provider

Early Career | 1996–2001

Senior Programmer at Thor Technologies (NYC) · Web Developer III at Production 451 (NYC) · Technical Staff at Raytheon (Tewksbury, MA) · Programmer/Analyst at Azerty (Buffalo, NY)

- Reduced build time from 7 hours to 3 minutes via build system modernization (Thor Technologies)
 - Built web-based search engine and CAD file management application (Raytheon)
 - Oracle/Linux environment administration and PL/SQL library development (Production 451)
 - EDI 850 integration and custom pricing module for wholesale inventory system (Azerty)
-

Education

SUNY Buffalo — BS Mechanical Engineering, Graduated Cum Laude

Potsdam HS — Graduated Salutatorian
